Professional Summary

B.Tech Artificial Intelligence and Data Science undergraduate with hands-on experience in Python/Flask applications, full-stack systems, and C-based algorithms. Completed a 15-day Machine Learning internship at NSIC and currently undertaking a Generative Engineering internship at Aspirasys. Built projects in predictive maintenance, algorithm implementation, database-backed applications, and data mining. Seeking a Software Engineering Internship to contribute problem-solving and collaborative development skills.

Education

B.S. Abdur Rahman Crescent Institute of Science and Technology, Chennai
B.Tech, Artificial Intelligence and Data Science 2024–2028 (Expected)
CGPA: 7.0/10 | Unity Public School (CBSE): Class XII 78%, Class X 80%
Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Software Engineering, Computer Networks, Data Mining, Machine Learning

Technical Skills

Programming: Python, C, SQL, JavaScript, R
Software Development: React, Node.js, Express, Flask, FastAPI, HTML, CSS
Computer Science: Data Structures and Algorithms, Sorting and Searching, Trees, Graph Traversal (BFS/DFS), Minimum Spanning Trees, Shortest-Path Algorithms, DBMS, Computer Networks
Data and Databases: MySQL, SQLite, NumPy, Pandas, scikit-learn, Prophet, RStudio
Tools: Git, GitHub, VS Code, Google Colab

Internship Experience

Generative Engineering Intern – Aspirasys Current | 1-month internship

- Developing Python applications with Flask through Aspirasys' IBM Generative Engineering internship.
- Gaining practical exposure to Machine Learning concepts and applying them in Python-based application development.

Machine Learning Intern – National Small Industries Corporation (NSIC) 15-day summer internship

- Completed hands-on training in Machine Learning with Python, covering the ML lifecycle and introductory model workflows.
- Practised data handling with NumPy and Pandas, functions, and CSV-based workflows.

Selected Projects

AeroSim – Aircraft Component Predictive Maintenance [GitHub] BUILDX Hackathon 2026 | 4–5 Nov 2026
React, TypeScript, Three.js, Python, FastAPI, SQLite

- Collaborated in a 36-hour T-Hub x B.S. Crescent BUILDX Hackathon team to develop a research prototype for aircraft-component failure prediction using historical sensor observations, inspection evidence, maintenance history, and physics-based degradation models.
- Contributed to 3D aircraft visualization and component-model presentation; the platform links flight predictions with post-flight observations to support component-level digital-twin updates.

Algorithmic Design Lab Suite C | Data Structures and Algorithms
C, Data Structures, Graph Theory

- Implemented 15 core algorithms, including searching and sorting methods, BFS/DFS, Red-Black Tree insertion, Kruskal's Minimum Spanning Tree, and Floyd–Warshall shortest paths.

SPIS – Smart Pharmacy Intelligence System Full-Stack Application
React, Material UI, Node.js, Express, MySQL, Python, FastAPI, scikit-learn, Prophet

- Developed a database-backed pharmacy platform with JWT authentication, role-based access, inventory and billing workflows, and an analytics dashboard.
- Integrated a Python ML service for demand forecasting, expiry-risk analysis, and auto-reorder recommendations.

GitHub: github.com/Rashad-007/Pharmacy-Management-System

CKD Early Detection Data Mining Mini-Project
R, RStudio, ggplot2, rpart, e1071, arules, corrplot

- Applied classification and clustering techniques to the UCI Chronic Kidney Disease dataset to explore data-driven early-detection patterns.

Campus Network Architecture Study: Documented campus topology and communication across the data-link, network, transport, and application layers.

Certifications

HackerRank: Python (Basic), SQL (Basic)
EduPyramids / SINE, IIT Bombay: R Training (97.5%), Advanced C++ Training (85%), Linux Training (80%), C Training (72.5%)
Languages: English, Tamil, Urdu (conversational), Arabic (basic)
